Visibility of Carpet Tile Seams in Solid or Near-Solid Color Tiles - Disclaimer It is expected that the seams of solid and near-solid carpet tiles will be visible. This is not considered or accepted as a product defect because it is due to the inherent characteristic of a distinct object (the tile in this case) in a solid color. It is what you see in any flooring material that is modular such as wood planks and ceramic tiles. For Solid or Near-Solid color tiles, we recommend a quarter-turn installation for square tiles and a herringbone installation for plank tiles. These installed configurations create a subtle texture on the floor by utilizing the visibility of the seams. If you prefer a carpet tile that masks most seams, select a product that has a multicolor pattern or texture that can minimize the visibility of tile seams in most applications. Please consult with your Carpets Inter rep for further guidance.
