

A KEY SOLUTION TO CLEAN ENERGY

Over 90% of Energy consumed to manufacture EcoSoft® is derived from positive clean Energy sources!

Global Energy demand for Electric Power is projected to rise considerably in the future. Diminishing fossil fuels predominantly used for producing power continue to pollute the environment with harmful greenhouse gas emissions. Purchasing carbon credits to offset this pollution is not only reactive but also expensive, therefore Power Plants are being governed to seek alternative fuel sources, such as bio-fuel or refuse derived fuel (RDF) from municipal solid waste. Since 2014 as part of Carpets Inters cradle to grave mission, we have donated all manufacturing 'off-cut' waste to be used as RDF by local Thailand Power Plants to generate positive clean energy.

Solar Roof - Thailand Factory

EcoSoft®

Over 90% Clean Energy Consumption

Clean energy is energy that comes from renewable, zero emission sources that do not pollute the atmosphere when used, as well as energy saved by energy efficiency measures. Clean energy is 100% pollution-free.

At CI we practice prevention at source, rather than solely purchasing Carbon Credits to offset our Carbon footprint. Reusing waste PET bottles, recycling waste for RDF, repurposing Organic waste to Agriculture and planting thousands of trees in the community each year... ITS JUST GOOD STEWARDSHIP!
